EDUCATION

Symbiosis Skills and Professional University

Bachelor of Science in Data Science

Pune, India

July 2024 – June 2027

Vivek Techno School

High School

Jaipur, India

April 2017 – May 2024

EXPERIENCE

Undergraduate Researcher

Secure Sensing & Learning Lab (SSL Lab), University of Wyoming, USA

May 2026 – Present

- Investigating memory-evoked neural signatures for biometric authentication under **Dr. Diksha Shukla**, Associate Professor of Computer Science.
- Research spans episodic memory challenge-response protocols, cross-session EEG stability, and deep embedding architectures for brainwave-based identity verification (BrainCAPTCHA system).

AI/ML Intern

AIT Global Inc

May 2025 – Aug. 2025

Pune, India

- Engineered **production Python pipelines** to parse, transform, and standardize **XML/DOCX** formats feeding **downstream analytics systems** at scale.
- Architected a **prototype AI document classification system** using **NLP** to auto-categorize PDF content; collaborated with senior engineers on **scalable AI-driven data workflow infrastructure**.

RECOGNITION

Cited at SANSfire 2026 – Skynet 1.0

Dr. Johannes Ullrich, Dean of Research & Director, SANS Internet Storm Center

July 2026

- MIRAGE flagged by Dr. Ullrich, founder of DShield.org and one of the most recognized figures in global network security, as a novel approach to AI-era honeypot intelligence and autonomous attacker behavioral analysis.

PROJECTS

MIRAGE | Go, Python, PyTorch, Ray RLLib, PostgreSQL, Neo4j, Ollama/LLaMA 3, Prometheus June. 2026 – Present

- Figured out A **distributed AI-powered deception network** with my Friend Vinayak that makes attackers think they own the machine: Go SSH honeypot with LLM-backed persistent fake system personas, world-state grounded via PostgreSQL, hardware-realistic latency profiles, and adversarial bait planting (fake keys, **.env** credentials, pivot IPs) adapting strategy per attacker class in real time.
- Trained a **contrastive behavioral embedding model** (CEBRA-inspired) over command-trajectory sequences for **cross-session attacker re-identification** across different IPs and toolsets; attacker infrastructure graphed in **Neo4j** (C2 IPs, pivot chains); sessions auto-generate **STIX 2.1 threat reports** with MITRE ATT&CK kill-chain mapping.
- First system to fingerprint autonomous AI attackers in the wild**: multi-modal detection via LLM inference timing, reasoning-trace analysis, and embedded prompt-injection probes identifies AI agents and attributes model family from behavioral signals alone; no prior published work on this.
- Released **MIRAGE-1 dataset** (OSF: doi.org/10.17605/OSF.IO/JM4E7): labeled SSH intrusion sessions with re-identification labels and ATT&CK mappings, addressing the field's documented data desert for real-world behavioral attack data.

NeuroForge | Python, FastAPI, MNE-Python, React, TypeScript, WebGL, SciPy, scikit-learn Mar. 2026 – Present

- A **production-grade neuro-engineering platform** for EEG/MEG/iEEG/fNIRS: BIDS-native, 11 fully wired modules covering universal data loading, WebGL visualization, ICA preprocessing, ERP cluster-permutation testing, and a BCI workbench hitting **95% accuracy / AUC 0.98** on alpha-state decoding via CSP and Riemannian classifiers.
- Ships **EEG microstates**, 1/f spectral parameterization, cross-session similarity mapping; full **Python SDK** and **REST API** with background job queue, RBAC auth, and reproducibility capture; every value on screen is a real computation on real MNE-Python, not a mock.

Engram | Python, PyQt6, Ollama, Qdrant, Mistral 7B, Sentence Transformers, NetworkX Mar. 2026 – Present

- A **memory-centric AI system** that refuses to be stateless: persistent semantic memory layers, identity modeling, and deterministic control flows let it retain and reason over who you are across sessions. **USB-native**, boots full identity on any machine and leaves zero trace on exit.
- Heading toward open-source launch as a foundational cognitive AI layer; long-term vision of **neuroadaptive human-AI cognitive augmentation** and a real-world **“second brain”** that goes well beyond what current AI assistants can do.

TECHNICAL SKILLS

Languages & Infra: Python, Go, C, SQL, TypeScript, PostgreSQL, Neo4j, Docker, Prometheus

ML / AI: PyTorch, Ray RLLib, MNE-Python, Scikit-learn, Hugging Face, Ollama, Qdrant, Sentence Transformers
